

GO-LIVE PREP SHEET

All the **code** for taking orders, holding slots, chasing EFT payments and running the kitchen board is built. What's left to open the doors is **information only you can supply** — the menu, the bank account, the address, a few policy decisions.

Fourteen items below, grouped by station. Fill in what you can directly on this sheet (typed or printed and handwritten, either works) and send it back. Nothing on this list needs a developer — it needs you.

BLOCKING pilot cannot start without this

CONFIRM a sensible default is proposed — just say yes or change it

01 MENU & PRICING

Feeds the menu editor (build in progress)

Final dish list

BLOCKING

Name, price, portion size, any options (e.g. spice level, sides), allergen text and dietary tags — one row per dish. A spreadsheet is fine.

Dish photos

BLOCKING

One photo per dish, landscape orientation preferred. Phone photos are fine — they'll be resized for the menu and dish pages.

Bank details

BLOCKING

Bank, account name, account number, branch code, account type — shown on the EFT payment page, exactly as customers must enter them.

VAT registration status

CONFIRM

Registered or not, and VAT number if registered — affects receipt wording.

→ Default assumed: not VAT registered

Cash ordering window

CONFIRM

Keep cash orders same-day only (00:00–10:00), or also allow cash for tomorrow's collection?

→ Recommended: keep same-day only for the pilot, revisit with real no-show data

No-show refund policy

CONFIRM

If a customer pays by EFT, is verified, then never collects — do they get a refund by default, or only if you decide to make an exception?

→ Default assumed: no automatic refund, owner exception only

Address & arrival instructions

BLOCKING

Full collection address, plus anything a stranger needs to know arriving at a home: which gate, where to park, no hooting, what to say at the door.

Allergen / home-kitchen disclaimer

BLOCKING

Your own wording on allergens and operating from a home kitchen.
The site currently shows a placeholder "not yet provided" — this replaces it.

EU data-hosting sign-off

BLOCKING

Order and payment-proof data is stored on a server in Finland (POPIA §72 permits this — the EU's protection standard qualifies). Needs your written confirmation that this is acceptable, as the information officer.

APPROVED ✓ / NOT YET

05 BRAND & CONTACT

Header, help page, EFT page, theme

Support WhatsApp number

BLOCKING

Shown on the header, help page and EFT page for payment problems only — not for routine orders.

Logo & brand colours

BLOCKING

The site currently runs a placeholder theme. Send a logo file and your preferred colours, or say "keep the placeholder" for the pilot.

06 TEAM

Staff accounts, seeded at launch

Owner + two managers

BLOCKING

Full name and email for each of the three staff accounts. Each gets a temporary password and must set their own on first login.

07 HOSTING & DOMAIN

Deploy configuration, backups

Off-server backup destination

BLOCKING

Where nightly database and photo backups get copied to — needs to live outside the server itself. A Hetzner Storage Box is the natural fit (same provider, separate failure domain) — needs an account and access credentials.

Site & photo hostnames

BLOCKING

Two subdomains under `rwg.org.za` — one for the ordering site, one for photo delivery, e.g. `orders.` and `media.`

SIGN-OFF

Once every item above is filled in, the pilot go-live checklist can run: backup/restore drill, bank details verified with a R 1 test order, both managers walked through their first order, then a two-week pilot with a review date.
